

1) Some projects are missed from features in tos svn repository.

#-----Missed-----

#Seems there are no any features to contain those following projects(Maybe in EE, not tos):

(Contained by org.talend.i18n.all\_feature, maybe in tcommon-studio-se?)  
org.talend.babel.all-feature

(Seems, no used or not? for tesb-studio-se??)  
org.talend.camel.libraries

(Although it's not included in org.talend.componentdesigner-feature, but need  
bee same as org.talend.componentdesigner-feature)  
org.talend.componentdesigner.rcp  
org.talend.componentdesigner.rcp.nl

(Don't know it's still useful or not. If need, should be same as  
org.talend.cwm.mip)  
org.talend.cwm.mip.editor

(Don't know still needed or not? Maybe should same as  
org.talend.designer.components.localprovider/tcommon-studio-se)  
org.talend.designer.components.libs

(Don't know why it didn't add in any features?, Should be added in same place  
of org.talend.designer.components.localprovider/tcommon-studio-se)  
org.talend.designer.mapper.advanced

(For dev, should be tcommon-studio-se)  
org.talend.developpement  
org.talend.emptyproject

(Seems, no used or not? for tesb-studio-se??)  
org.talend.esb.ws

(Seems, no used or not? for tdi/tcommon-studio-se??)  
org.talend.helpers  
org.talend.helpers.nl

(Same as org.talend.babel.all-feature)  
org.talend.i18n.all-feature

(?? Maybe component or ee will need. Put it in tcommon-studio-se first)  
org.talend.libraries.apache.hive  
org.talend.libraries.hadoop  
org.talend.libraries.jdbc.saphana  
org.talend.libraries.w3c  
org.talend.libraries.windowKey

(Maybe should be tdi-studio-se)  
org.talend.rcp.branding.jetlxcmmty  
org.talend.rcp.branding.jetlxcmmty-feature  
org.talend.rcp.branding.sdi

```

org.talend.rcp.branding.sdi feature

(maybe should for tdi-studio-se???, but seems the contained plugins are in
tcommon-studio-se )
org.talend.rcp.branding.tos.test feature

(should be tcommon-studio-se, same as org.talend.repository.view)
org.talend.repository.view.example

(No need to do)
pom.xml
talend.target.definition
test.drools_training
tuj
workspace

```

PS, if strikethrough, it have been added in one list files.

## 2) About the testutils

|development/org.talend.testutils

Maybe, need move it to *tcommon-studio-se*, because all tests depend on it.

## 3) For *tcommon-studio-se* (See, *tos\_features\_tree/tos2tcommon-studio-se.list.ods*)

|tos/org.talend.tos\_feature      Because tos/org.talend.esbstandard-feature, tos/org.talend.rcp.branding.tos\_feature.  
|tos/org.talend.utils\_feature      Because TOP (tos/org.talend.top.libraries\_feature), and the utils bundle is used for tos too.

### a) I comment something:

```

# |tos/org.talend.tos_feature
# Includes Features:
# |tos/org.talend.common.feature
# |tos/org.talend.componentdesigner.feature
# |tos/org.talend.core_feature
# |tos/org.talend.designer.business_feature
# |tos/org.talend.designer_feature
# |tos/org.talend.help_feature
# |tos/org.talend.rcp_feature
# |tos/org.talend.repository_feature
# |tos/org.talend.sbi_feature
# |tos/org.talend.spagic_feature
# \tos/org.talend.tos.components_feature

```

Don't think this should be in **tcommon-studio-se** for other products, Maybe only for **tdi-studio-se**

Don't think this should be in **tcommon-studio-se**, it should be only **tdi-studio-se**. maybe  
Don't think this should be in **tcommon-studio-se**, it should be only **tdi-studio-se**. Maybe  
Because BD (*tos/org.talend.tos.bigdata\_feature*) need it, so should be in **tcommon-studio-se**,

Because the *tos\_feature* is in *tcommon-studio-se*, so all includes feature are all in *tcommon-studio-se*,  
Don't know is it ok?

### b) But something like:

|tos/org.talend.repository.view.di

Should only for **tdi-studio-se**.

This should be only for *tdi-studio-se*. Because it added in *repository\_feature*, so add in *tcommon-studio-se* now.

c) for tos.components\_feature:

```
| -tos/org.talend.tos.components_feature
# Includes Features:
| -tos/org.talend.esb.tooling.ws.consumer-feature    Why need esb components?
```

3) I have comment something in the list files. For example(tos2tbd-studio-se.list):

```
# -----NLs-----
org.talend.designer.hdfsbrowse.nl
org.talend.oozie.scheduler.nl

# -----Tests-----
org.talend.oozie.scheduler.test
```

And something for (tos2tcommon-studio-se.list):

```
#Because org.talend.top.libraries_feature and org.talend.tos.bigdata.libraries_feature contained.
org.talend.libraries.hadoop.apache.0.20.2
org.talend.libraries.hadoop.apache.0.20.203
org.talend.libraries.hadoop.apache.0.20.204
org.talend.libraries.hadoop.apache.1.0.0
org.talend.libraries.hadoop.cloudera.0.20.cdh3
org.talend.libraries.hadoop.cloudera.cdh4
org.talend.libraries.hadoop.hdp.1.0
org.talend.libraries.hadoop.hdp.1.2
org.talend.libraries.hadoop.mapr
org.talend.libraries.hadoop.mapr2
```
