

Don't find out which feature to contain those following projects:

- **tos svn repository**

```
#for P2?
    org.talend.babel.all-feature
    org.talend.i18n.all-feature

# for tesb-studio-se?
    org.talend.camel.libraries

# same org.talend.componentdesigner in tdi-studio-se?
    org.talend.componentdesigner.rcp
    org.talend.componentdesigner.rcp.nl

# same as org.talend.cwm.mip in tcommon-studio-se?
    org.talend.cwm.mip.editor

    org.talend.designer.components.libs

# same org.talend.designer.mapper in tdi-studio-se?
org.talend.designer.mapper.advanced

# dev settings should be tcommon-studio-ee?
    org.talend.developpement
    org.talend.emptyproject

    org.talend.esb.ws

    org.talend.helpers
    org.talend.helpers.nl

# should be in tbd-studio-se?
    org.talend.libraries.apache.hive
    org.talend.libraries.hadoop

# same as org.talend.jdbc... in tcommon-studio-se?
    org.talend.libraries.jdbc.saphana

    org.talend.libraries.w3c

    org.talend.rcp.branding.jetlxcmmty
    org.talend.rcp.branding.jetlxcmmty-feature
    org.talend.rcp.branding.sdi
    org.talend.rcp.branding.sdi-feature

    test.drools_training
    tuj
```

PS, if ~~striketthrough~~, means it has been in the tXXX-studio-[se]e list.

```

```
org.talend.test.build
```

```
org.talend.test.performance
```

```
#should be in tcommon-studio-ee
```

```
org.talend.commandline.performances
```

Now, for top, tdq, tom and tem. Did for studio via feature, so there is only **top2tdq-studio-se. tdq2tdq-studio-ee**, etc.

But for tis\_private, only move all studio bundles to **tcommon-studio-ee**.
